Traditionally Crafted

The Traditional Conservatory Company was established in response to market demand for bespoke, hardwood conservatories and orangeries.

Combining more than 100 years industry experience, our team of craftsmen and designers create, manufacture and install our products to the highest possible standards.

After months of research and development, we can manufacture the complete range of our existing window and door product profiles for our Conservatories and Orangeries.

In offering a product choice that's available in a variety of colours coupled with a multitude of added extras, we will create a product to complement and enhance the appearance and functionality of your home.

Stylishly Applied

Our conservatories and orangeries are the perfect way to create luxury living spaces that blend seamlessly with their natural surroundings.

Our expertise and experience, combined with quality materials and the latest manufacturing techniques, make us the company of choice for your orangery and conservatory requirements.

Being one of the oldest and most versatile materials its not surprising to know timber is the best environmental choice. Fully recyclable and waste efficient. With its natural structural strength and durability, timber is one of the best for highly effective insulating qualities.

The hardwood we use is sourced from certified sustainable forests and specially selected for its quality and tight grain, perfectly suitable for joinery purposes, then tailored to your exact needs.

Each product is fully spray finished in the colour of your choice, with a microporous sealant. This process enables the timber to breathe and provides long lasting weather protection unlike more conventional paint finishes and varnishes.

Being number one green choice with very little maintenance required is the reason why more property owners are favouring timber to add style and character to their homes.

- Key locking handles
- Insurance approved security
- Opening restrictor stays
- Low maintenance

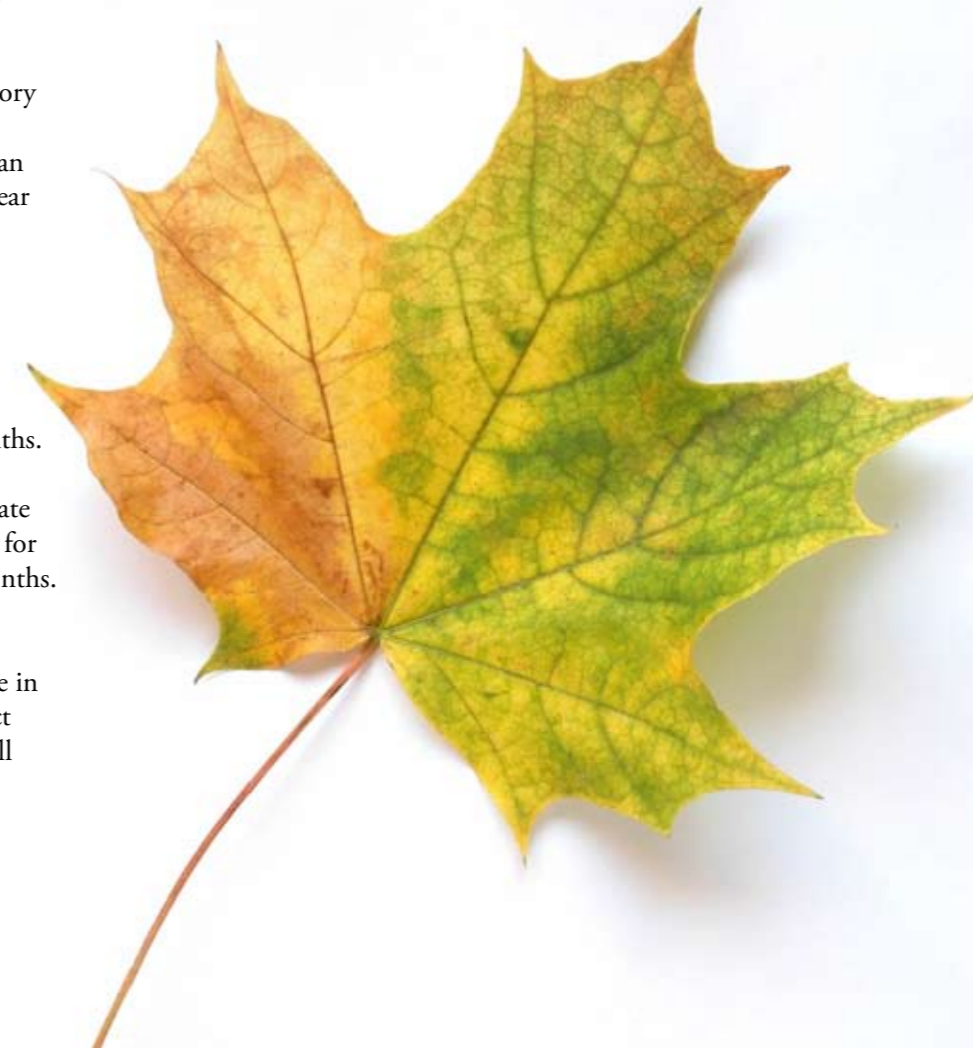

For Every Season

The priority with any conservatory or orangery, is that it can be accommodated comfortably as an integral part of your home all year round.

The importance of the correct ventilation systems, opening windows, roof vents, integral window blinds and doors is paramount in the summer months.

To the other extreme, an adequate heating system is also a priority for the contrasting, cold winter months.

The ideal solution is an air conditioning unit where you are in total control to achieve the exact room temperature required at all times, all the year round.

Where it all begins

Creation

With so many variations and alternatives in conservatory and orangery design, combined with our cutting edge manufacturing techniques, almost any thing is possible.

Our company ethos is all about listening to your requirements and delivering a product and service to not only meet, but exceed your expectations.

Our unique approach starts with an initial design consultation, providing you with the opportunity to tell us exactly what you are looking to achieve.

The next stage begins with our talented, experienced design team, who will work on various concepts which will be presented to you by your initial design consultant.

Luxury Living

Making it run smoothly

Project Management

When we have your approval and the detailed survey is satisfactory, complete and authorised for production, The Traditional Conservatory Company will assign a dedicated project manager to ensure your project runs smoothly.

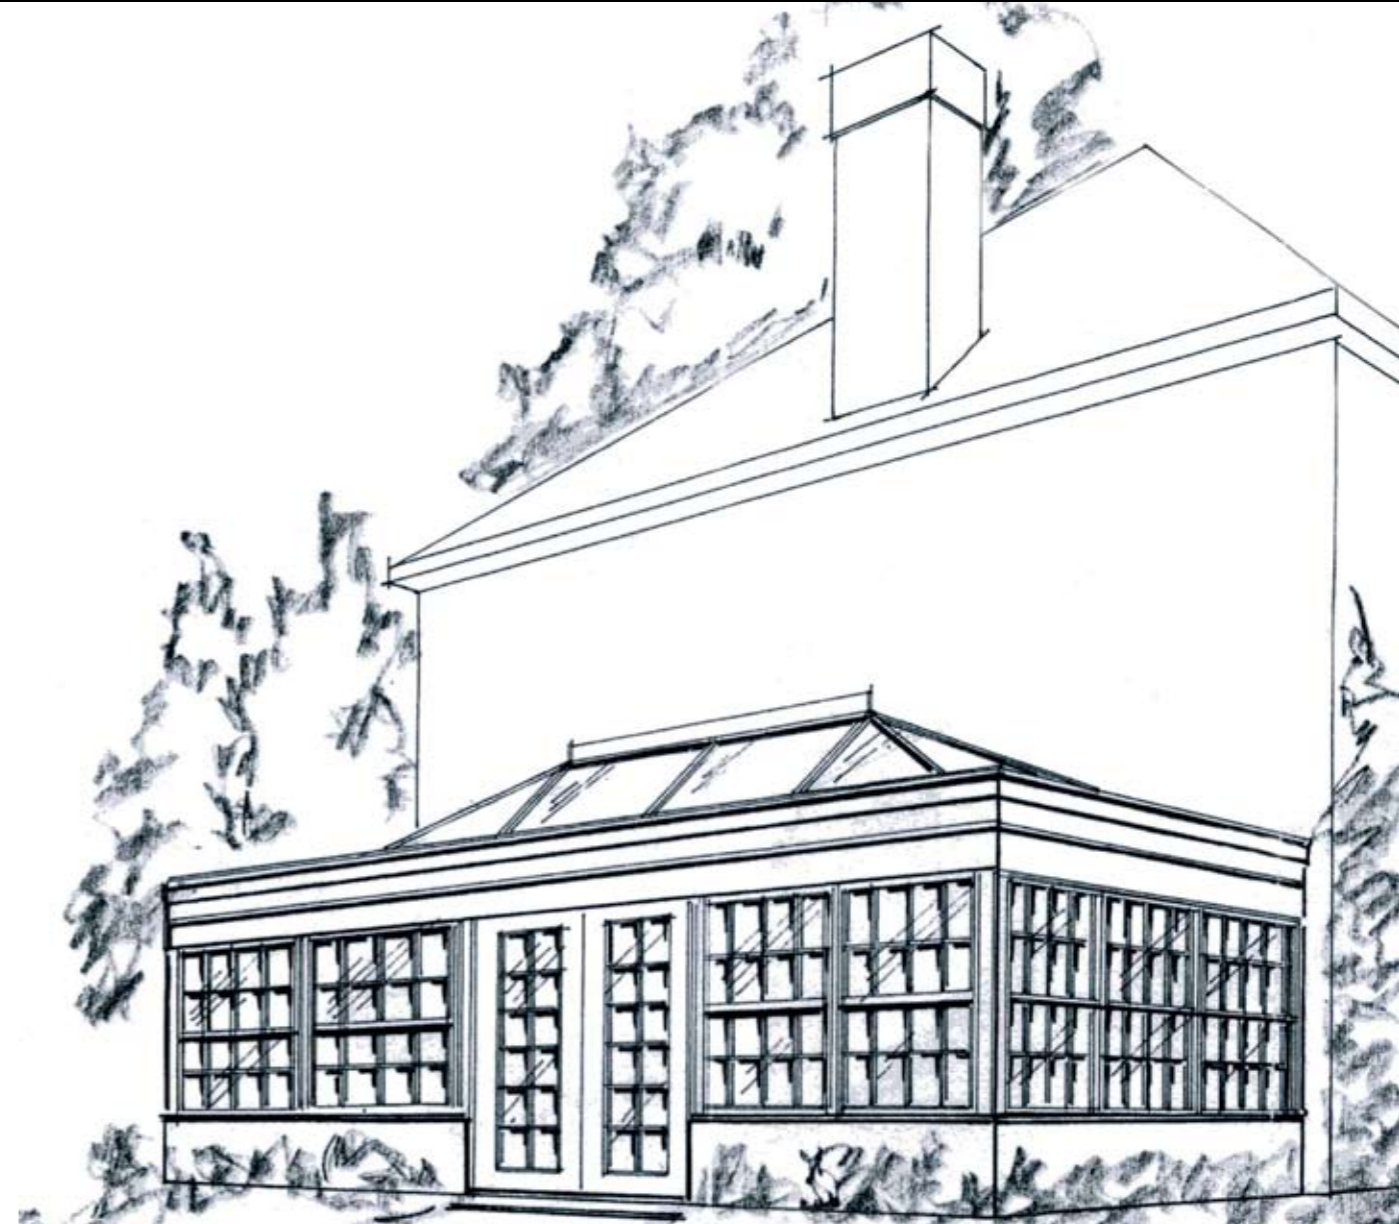

Their role in your project is to oversee the manufacture, installation and after sales service.

This approach provides you with a single point of contact and the peace of mind that your project is being efficiently managed.

The Traditional Conservatory Company offers industry leading after sales service and are always on call to answer any queries you have after your installation.

Should planning approval be required, we will undertake all of the necessary drawings and paperwork requested by your local authority and ensure the depth of footings are confirmed by us prior to starting the base foundations.

We will also, as standard, ensure that all building regulations are adhered to.
